Digital Security Controls

900MHz Spread Spectrum wireless technology is superior for security applications because it provides the proven reliability of multiple frequency signal transmission and the high security of an encoded signal. Spread spectrum also provides more frequent supervisory communications between the control panel and sensor... a critical issue in the protection of lives and property!

- Can be used as a self contained magnetic door or window contact or as a terminal connection for an external device
- Complete with surface mount magnet
- 2 internal reed-switch contacts accommodate different mounting requirements when used as a self contained door or window contact
- Fully supervised by controller for :
 - tamper
 - low battery
 - device fault
 - open/close
- 3 AAA alkaline batteries (supplied)
- Operating temperature : 32° to 122°F (0° to 50°C)
- Dimensions : 4.5"W x 1.5"H x 1.13"D
(11.4 x 3.8 x 2.9cm)
