900MHz Spread Spectrum wireless technology is superior for security applications because it provides the proven reliability of multiple frequency signal transmission and the high security of an encoded signal. Spread spectrum also provides more frequent supervisory communications between the control panel and sensor... a critical issue in the protection of lives and property!

- Press the 2 outside buttons for 2 seconds to transmit a panic alarm
- Transmits alarm whether alarm system is armed or not
- Manual test button allows user to check operation and test battery via visual indication on system keypad
