900MHz Spread Spectrum wireless technology is superior for security applications because it provides the proven reliability of multiple frequency signal transmission and the high security of an encoded signal. Spread Spectrum also provides more frequent supervisory communications between the control panel and sensor... a critical issue in the protection of lives and property!

- Can be used as a self contained magnetic door or window contact
- Complete with surface mount magnet
- Fully supervised by controller for :
 - tamper
 - low battery
 - device fault
