900MHz Spread Spectrum wireless technology is superior for security applications because it provides the proven reliability of multiple frequency signal transmission and the high security of an encoded signal. Spread Spectrum also provides more frequent supervisory communications between the control panel and sensor... a critical issue in the protection of lives and property!

- Flush-mount transmitter for concealed door and window contact applications
- Complete with flush-mount magnet
- Fully supervised by controller for :
 - tamper
 - low battery
 - device fault
 - open/close
- 3 year battery life
